Solution

De-Vere The Belfry

Company:

Famous throughout the world for its links with the Ryder Cup, The De Vere Belfry offers much more than golf. With over 300 rooms and suites and a huge range of facilities for business and leisure activities the Belfry is a substantial and diverse business.

Problem:

All these activities generate a substantial amount of waste and the costs associated with this are significant. All the waste is brought to a central location and is put into a sizeable on-site compactor prior to being sent to landfill.

Before:

Solution:

A **Mil-tek** 205 Baler has been installed adjacent to the compactor. All the packaging waste is now segregated, made into bales and is collected by a local recycler.

Savings:

By removing the cardboard packaging from the waste stream the need to empty the compactor has been reduced by 30%. This has resulted in annual savings of over £1,300. As landfill costs rise, these savings will increase significantly.

Additional Benefits:

- The baler is located outside, taking up no valuable inside storage space.
- Cardboard is put directly into the baler instead of the compactor
- By acting now The Belfry will avoid much of the impact of the imminent increase in landfill costs.
